

FARM JOTTINGS

THE WORLD WHEAT SITUATION

At the present time the world wheat situation is governed by two important factors, namely (1) the volume of the old crop wheat, which will be required by importing countries before July 31st, along with the conditions surrounding the movement, and (2) the development of new crops in Europe and North America.

Interest in the 1935 production, says the monthly review by the Agricultural Branch of the Dominion Bureau of Statistics dated June 21, now centres around wheat crops in various stages of development in

Canada, in the United States and in Europe. While it is too early to indicate yields, owing to natural hazards to be experienced before the grain is ready for market, there are several general observations that may be made, based upon developments up to the present time. In the first place, there is evidence that Europe is not going to harvest a better than average yield per acre and there is little prospect of a recurrence of the phenomenal harvests of 1933.

The cool weather experienced in North America during the month of May was also prevalent in Europe, snow and frost being reported in central and northern countries. Adverse reports are being received from Spain, Portugal and southern Italy, while crop conditions in France and Poland are not as favorable as they were a year ago. In

North Africa, compared with a year ago there will be a substantial reduction in the yield, the most important losses being reported from Morocco.

Canada was Japan's best customer for tea during the whole of 1934.

As an example of contrasts of climate in Canada, the spring on the Vancouver coast has not only been late and cold but also very dry, 47 days prior to June 11 (when the report was issued) having been without rain.

As in former years flour ranks as the principal commodity imported into Hongkong from Canada, and, in keeping with other Canadian products in 1934, showed an increase in trade over the previous year.

A three-year study by the Division of Economic Fibre Production of the Experimental Farms Branch has shown that Canadian home-grown flaxseed has given a higher yield of fibre but a lower yield of seed per acre.

The Week's Work in Canada's Parliament

OTTAWA—Canada's three political leaders displayed their true platform colors in the House of Commons this week. Not Mr. Bennett's all-important wheat marketing plans but Regina's little eight-year old Margaret Millar was stimulus for verbal fireworks which vividly portrayed the predominating hue of each.

Margaret knew she had not mother, but not until she arrived back from a happy picnic expecting to find her daddy waiting to meet her did she learn from newsboy howls she was an orphan. While Margaret had been laughing and playing with her little friends at a beach resort near Regina Monday afternoon, her father, Detective Charles Millar had been charged with the unpleasant duty of helping to try to restore order and common-sense to 1,500 mob-crazed relief strikers in the Saskatchewan capital.

Spurred on by a Moscow-paid leader Arthur Evans and aides, a handful of this crowd had overpowered Millar, brutally slugged him to death then and there.

If they hadn't known it before, Regina authorities knew then their problem was clear—and grave. Order and reason versus chaos, death and hysteria.

But at Ottawa it was different. The issue as the Bennett-King-Woodsworth trio saw it turned into a three-way issue of reason and practical action, politics with the Liberal Saskatchewan Government and the more hysteria the better.

Nobody knew any better than did Prime Minister Bennett how grave was the situation faced in Regina and all Canada over this trouble in relief camps. Mr. Bennett said so in plain words, got what he expected, no support from the Opposition benches. Mr. Bennett alone apparently had in mind what not all Canada is on relief, that lawlessness would solve no economic problem in Canada.

Mr. Bennett reminded the House and the country he knew full well relief camps were not luxurious hotels, were never intended to be, that certainly all men in relief camps were not Communists, paid agitators.

The straight-talking sometimes cold - appearing Prime Minister might have taken the opportunity to make a big play for unfortunate victims of a world depression waiting employment in relief camps. He did not. He stuck to the problem in hand, gave the Opposition to understand he would not sit back and allow a Communist uprising in Canada at this stage of the game, something to think about when he let it be known that 800 of the 1,500 now camped in Regina had never been in relief camps in their lives. And despite all this, not a Mountie had a round of ammunition on his person when policemen waded in to restore order.

Mr. Mackenzie King asked the Government to show the him the telegrams Mr. Bennett had sent Liberal Premier Gardiner at Regina, and those Gardiner had dispatched to Ottawa.

Messrs. Woodsworth and McInnis (Vancouver) with the support of U.F.O. Agnes Macphail laid the blame of it all at Mr. Bennett's feet, became as hysterical as any mob member as they shot forth flaming tirades of C.C.F. propaganda instead of giving the Government any concrete suggestions in a grave emergency. Emotion appeal ran rampant as they unintentionally or otherwise exhorted the crowds in Regina to greater efforts of destruction and bloodshed.

A redraft of Bill No. 98 to create a wheat board was bared in the House Tuesday. Two weeks of public hearings have apparently resulted in new features of the Government's measure being:

Fixed minimum price for wheat, set by order-in-council; a board to take all wheat from the producers the trade cannot or will not take; exclusive marketing powers vested in the board but to be effective only by proclamation and if found necessary.

The special committee which has been working on the bill is expected to report to the House in a day or two. Full details of the new set up will then be known.

ACROSS THE SEA

When the Normandie, the giant French Line boat, recently crossed the Atlantic she added another notable entry to the record of ocean voyages.

Christopher Columbus took 70 days in 1492 to sail from Palos in Spain, to San Salvador in the Gulf of Mexico. The fastest time in which a sailing vessel has crossed the Atlantic is 12 days 4 hours, 1 minute and 19 seconds. That time was made by the Atlantic in 1905 in the race for the German Emperor's cup. The first steamship to cross the Atlantic was the Savannah, in 1819, which used sails part of the time. Regular steamship service did not begin until 1838.

Beef Marketing Act In Great Britain

The beef market in Great Britain is not only of major importance to the home producer, but also to the rearers of beef cattle in Canada, Australia and South America. In an article on the development of the beef-market in Great Britain in the April issue of the Empire Journal of Experimental Agriculture, Dr. K. Murray and Professor J. A. Scott Watson present a statistical survey of the subject, emphasize present trends and indicate their causes, and finally attempt to foretell what may happen in the future.

The per capita consumption of meat in Great Britain rose from 85 pounds in 1871 to 141 pounds in 1923-24. Of this 39 per cent was due to increased population and 61 per cent due to increased consumption. Future increase in meat consumption, it is held, will depend far more upon per capita consumption than upon increase in population.

Whereas the per capita consumption of mutton, lamb and pig-meat has greatly increased during the period 1925-26, that of beef and veal has fallen from 70 to 66 pounds. In this period the home output has risen from 602,000 to 607,000 tons, but imports have fallen from 775,000 to 717,000 tons. In the four years 1927-31, about 45 per cent of the average annual supplies was home-produced, 35 per cent was imported chilled beef, 10 per cent imported frozen beef and 7½ per cent imported fat cattle. The character of the home supplies has changed considerably in the last 30 years. For example, cow beef has increased and beef from steers and maiden heifers has diminished. Since 1929 consumption of imported chilled beef has increased at the expense of frozen and home-produced beef.

Changes in price of the various grades of beef have been determined much more by changing demand than by supplies (except for seasonal variations in the home-supply) and demand has been mainly governed by purchasing power. The popularity of chilled beef is not only due to its relatively low price but to the uniformity of the product.

In recent years markets which have hitherto absorbed foreign beef have been closed and supplies have been diverted to Britain. After failing to help the beef producers by restricting foreign supplies, the British Government is now paying them a direct subsidy. A principal reason why the demand for home-killed beef has fallen is the increasing supply of inferior cow-beef, which results from the expansion in the dairy industry. Another is reduced purchasing power of the people.

PERSONALS

N. C. deRonne left for Stanley this morning. He was accompanied by C. H. Unverzagt.

Among the passengers on this morning's train was Mr. Pirie, general accountant for the Consolidated Goid Alluvials.

Frank L. Cummings, who has the contract to paint the P.G.E. bridge was here early in the week.

P. W. Field, general manager of the Sydney Roofing Co., accompanied by Mrs. Field, are spending some time in the Cariboo, visiting their daughter and son-in-law, on Friday they visited Prince George with J. D. Pearson.

R. B. SWAILES M.L.A., SPEAKS ON C.C.F. ISSUE

(Continued from page 1)

generation of young men by way of relief camps and unemployment.

The speaker reminded his hearers of Mr. Bennett's election promises in 1930, and Mr. Pattullo's promises in 1933; each one having said that they would close the relief camps in 30 days. The relief men recently decided that they had waited long enough for these promises to be implemented. When they came to Vancouver Mr. McGeer said the matter was none of his business; so they went to Victoria, where Mr. Pattullo also stated that it was none of his business and that he could do nothing. Mr. Bennett was then appealed to, but he also said that it was none of this business, as once the men had left the camps they could do nothing about it. They then decided to trek to Ottawa and lay their case before the Government and it was then that Mr. Bennett decided that it was his business, for the Canadian Mounted Police were called out to stop the men at Regina; thus proving that Canada is a free country.

Mr. Swailes said that reports to the effect that Canada was regaining its prosperity were quite true, but that this prosperity did not extend to the working classes. In support of his contention that the controllers of wealth were still growing richer, despite the wide-spread misery and poverty among the workers, the speaker cited the case of the Consolidated Mining & Smelting Company which made a net profit of \$2,211,599.89 (nearly two and one-quarter million dollars) for the year 1934 as compared with \$1,056,273.52 for the year 1933.

Mr. Swailes referred to the way the Canadian natural resources as well as Canadian money had been given away, citing the Canadian Pacific Railway, the Hudsons Bay Company, and more recently the Fraser River bridge.

The people of Canada, said the speaker, had voted first for one and then for the other of the two old political parties, each time being promised reforms which would benefit them, and yet the condition of the workers, in relation to the wealth produced, is worse than it was fifty years ago.

The speaker closed his address with the statement that the Government of Canada was their business and that they "should mind their own business."

At the close of the meeting several questions were asked, the answers given were apparently satisfactory to the audience as a whole.

ANNUAL REPORT OF MINERAL DIST. NO. 2

(Continued from page 1)

B. M. MacDonald has taken in a ½-yard Marian caterpillar power shovel to his property on Manson Creek.

Yukon Border Placer Gold Incorporated has purchased the leases held by J. J. Warren on Tom Creek and it is reported that Keystone drilling will be done to test the buried channel of the creek.

It has been conclusively proven at the property of the Consolidated Gold Alluvials of B.C. Limited at Wingdam that the deep gravels can be drained and that the Australian method of deep-lead mining can be applied to such properties in this country. The inter-gravel pay-streak at this property is being mined by drifting methods and is yielding over 100 ounces of gold a week. The bedrock gravels will shortly be attacked and the results of this work will be watched with great interest.

Bullion Placers property is now the largest placer operation in B.C. All the available water rights of this property are being used. English capital carried out systematic Keystone drilling on Sardine Flats on the Quesnel river during the past winter, and while the results are not definitely known, they are not believed to have been very encouraging.

A 1½-cubic yard capacity bucket caterpillar boom-drag-line has been installed by Nechako Gold Limited at its property on the Nechako River near Miworth.

Placer-mining has been revived in this district, and the probable success of the operations of Consolidated Gold Alluvials of B.C. Limited at Wingdam will be a determining factor in the future of placer-mining in the District.

Maurice McArdle of Tuckett fame was here again this week. Mac is looking forward to the shooting season this fall, and is importing a new gun from an English maker that is guaranteed to kill "no matter which way the wind blows."

BOARD OF TRADE HOST TO VISITORS

(Continued from page 1)

stating that most of the trouble was engineered outside of Canada, using as their tools paid agitators. This was known for a fact. The same trouble prevailed in the United States, he said, only to a much greater degree than in Canada.

The President introduced Mr. Solibakke the first guest speaker, who gave the Board a very interesting address for a quarter of an hour. Mr Solibakke spoke of the great possibilities of the Cariboo District, taking into consideration the placer possibilities of the district. He said he firmly believed that there would be more placer gold taken out of Cariboo in the future than has been recovered in the past, and gave the highest praise to Mr. Campbell Mackenzie, superintendent of the Cariboo Gold Alluvials (Wingdam), for the work he has accomplished since being in charge of the operation. He then went on to describe some of his experiences in the financing of the Cariboo Gold Quartz mine. He said he sold shares to one old man of over eighty years, who informed him on his second visit that he had mined on Lightning Creek in 1885. This old prospector, who had mined all over the American continent, told Mr. Solibakke that "there are 100 miles of country in Cariboo with bigger possibilities than any place in the world with regard to mining—and less known about it than any place in the world." Mr. Solibakke pointed out that money had been spent to find mines. He said that the whole of the country between Hixon Creek and Keithley Creek was potential ground for big mines, and no doubt they would be uncovered later. Mr. Solibakke's talk was thoroughly enjoyed by the members.

Mr. Ramsay, district engineer then spoke for a few minutes, and assured the Board of his co-operation with them in all matters pertaining to public works, and said he would keep the roads in the best condition that the money he received would allow.
